

Enhanced Performance & Protection for **CONVOOTHERM** Combi Steamers

European WaterCare & Convotherm

Working together!

European WaterCare are one of the UK's leading solution providers in water treatment to the foodservice industry and have a long and established relationship with Convotherm.

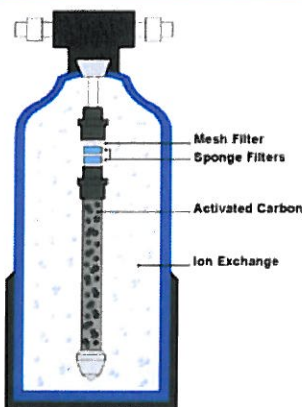

Together we have developed a CTU system, monitoring and exchange package that will protect your Convotherm oven against damage that can be caused by water related problems.

The CTU water treatment system removes temporary hardness from the water, which will prevent the formation of lime scale which is the major cause of equipment failure, kitchen down time and costly repairs. In addition it will remove heavy metals, dissolved solids to allow the full flavour of food to be enjoyed front of house.

European WaterCare's in-house service team, backed up by a team of trained, nationwide engineers can provide a comprehensive monitoring and exchange programme to ensure peace of mind and guarantee against scale related problems.

In addition, European WaterCare can offer a wide range of water treatment solutions and products such as Reverse Osmosis, Automatic Softeners, cartridge filters and pump sets, honed from over 20 years of working with market leaders within the foodservice industry.

Untreated water is responsible for upto 70% of equipment faults on a wide range of catering equipment.

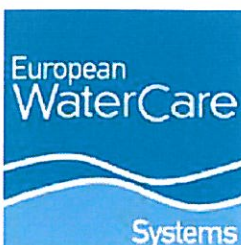

Regular problems may include:

- Energy wastage due to scale build up on elements
- Poor equipment performance
- Increase maintenance and repair costs

Benefits of CTU System:

- Assures food grade standards of potability including scum removal
- Removes heavy metals - lead, copper, mercury etc. As well as chlorine, thus allowing the full flavour of food to be experienced
- Prevents formation of scale on metal surfaces
- Reduces maintenance costs and revenue loss through equipment breakdown
- Prolongs equipment life
