

**Minimises drain
cleaning call-out costs**

**Improves the quality of
waste water discharge**

Eliminates odours

**Reduces drain cleaning
chemical costs**

**Corrosion free
construction**

Professional Grease Management

Say goodbye to flooded floors, remove foul odours and eliminate costly repairs.

The Grease Chief is a new grease management solution from WaterCare for all foodservice operators running busy commercial kitchens.

Designed to efficiently separate fats, oils and grease (FOG) from wastewater, the Grease Chief allows for the separation of solids and grease and contains them in a holding section of the unit (the 'trap'). This not only prevents harmful waste from going to drain by improving the quality of waste water discharge but also provides a cost saving on expensive drain clearing call-outs.

The Grease Chief is designed specifically to prevent the need for expensive plumber call-outs by preventing food waste, oils and grease from clogging up drains or connected waste water pumps.

Traditional grease traps can corrode over time due to the high pH levels present in most wastewater, however, Grease Chief is made from high density plastic and will give many years of trouble free performance.

**WASTE WATER
GREASE TRAP**

Technical Specifications

The trap has a clearly defined inlet and outlet. This is critical as there is a flow restrictor on the inlet to slow down the discharge into the unit but allow a greater flow out. Failure to do this will cause a flood.

The connections are standard 1 1/2 plastic plumbing push fit but these can be reduced down to a minimum of 1 1/4" inlet or upsized to 2".

Grease Chief - Professional Grease Management	
STANDARD	BS EN 1825-1 2001 Standard
WEIGHT (EMPTY)	8.85Kg
CAPACITY TO INLET/OUTLET	26 litres
CAPACITY OF OIL TANK	4 litres
HEIGHT (CLEARANCE TO REMOVE PLATE)	450mm (ALLOW AT LEAST 500mm ADDITIONAL HEIGHT)
WIDTH	250mm
DEPTH	380mm
UNIT	NON POWERED
TRAP TYPE	MANUAL
NO OF SINKS/EQUIPMENT	2 SINKS OR 1 PIECE OF EQUIPMENT
